

How do I use my iPad as a *remote control*?

After you've installed the DIRECTV™ iPad® App, launch the app and tap the *Remote* button on the blue menu bar. You'll have access to most of the button commands found on your DIRECTV *remote control* as well as additional commands such as slow motion. You also have the ability to change the *remote* mode to a mini *remote*, which gives you access to primary DVR *controls*.
